

Cleaning Adware from Safari

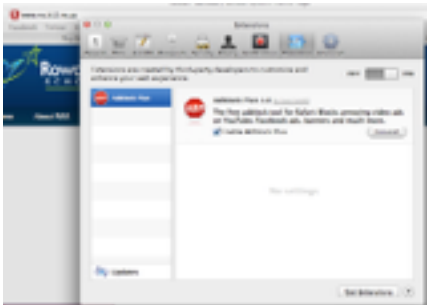

If Safari suddenly starts defaulting to a different search engine or ads begin popping up on your screen, you are probably infected with malware or adware.

To remove the adware:

- Open Safari
- Open Safari Preferences

- Click on the Extensions Tab

- Uninstall any extensions or add-on that were not purposefully installed.
- Click on the General Tab in Safari Preferences
- Reset the Home Page to your desired home page
- Reset the Default Search Engine to your preferred search engine
